

Press release

Monosuisse Group Expands to Mexico

Due to the growing market in the Americas, Monosuisse has decided to invest in a new production plant in Mexico.

Monosuisse is the leading manufacturer of various mono- and multifilament yarns for industrial use. It has production sites in Switzerland, Romania, Poland and Italy and sales centres in 15 countries. The company's outstanding products are tailored to the production of filtration and screen printing fabrics, paper machine clothing, 3D fabrics, conveyor belts, braided hoses, hook & loop tapes and many other technical applications.

We are pleased to announce the establishment of a new operation in Querétaro / Mexico. The state of Querétaro is a growing region for a number of manufacturing industries, including automotive and aerospace, and has a skilled workforce and professional business environment.

We plan to construct a 10,000 m² facility and expect to employ approximately 50 people. The facility will produce coarse count monofilament yarns that are used in a variety of technical industries.

The launch of the plant is projected for the first quarter of 2016.

Our growth in Mexico offers opportunities for the Monosuisse Group to continue to align itself with the on-going needs of our global customers.
